October 9, 2020

Eight years ago today, the first patient arrived at Pediatric Endocrinology of Rhode Island. As you are aware, the practice is closing but I remain very proud of Pediatric Endocrinology of Rhode Island. Alexis and I are very sad to say goodbye to all the patients we've been so honoured to have cross our threshold since the practice's inception.

I am truly excited by my new professional opportunity and for my return to my homeland. However, COVID-19 has played a large role in my decision to close the practice and I feel obligated to be honest and explain that the patient care related portion of the practice is closing earlier than initially planned because the practice can no longer afford to meet payroll or other expenses such as malpractice insurance.

However, I am very excited to announce that Alexis will be starting with a new Pediatric Endocrinologist's practice on October 19, 2020 in a role that essentially serves as a promotion from her current position with Pediatric Endocrinology of Rhode Island. I am 100% confident of her future success and I am tremendously proud of her achievements, both past and present.

I will be unable to refill any prescriptions, complete any forms or provide any medical advice after 5 pm EST on October 15, 2020. However, to ease in the transition of care, I have extended the deadline to have the release of records form received by our office to October 28, 2020 at 5 pm and I have hired Alexis on a contract basis to help get your records faxed to your new endocrinologist's office.

PediatricEndocrinology-RI.com will continue to be the best source of updates until October 30, 2020. After that date, you will find a link to Morgan Records Management where your records will be stored for seven years.

The business side of the practice will remain functional for billing related matters only until December 15, 2020.

With ongoing gratitude and love,

Dr. M
